

Daniel Shashank Deshmukh

Full-Stack Developer · AI Systems Builder · SaaS Architect

+91 8552084251 · deshmukhdaniel2005@gmail.com · github.com/DanielDeshmukh · Mumbai, India · linkedin.com/in/danieldeshmukh

PROFILE

Computer Science graduate (Mumbai University, May 2026) who doesn't just study AI, he ships it. Delivered production-grade systems across SaaS, agentic AI, and full-stack development: a live café POS serving real customers daily, a CLI agentic AI engine with ~1.8s average response time, and Autobots a multi-cluster AI swarm CLI published to PyPI that orchestrates 9 specialized NVIDIA model clusters with phased planning, self-healing repair loops, and approval-gated autonomous execution. Seeking a product or AI-focused team where the standard is: build things that actually work.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend: React.js 19, TailwindCSS, Vite, Figma, Responsive Design, SEO Optimisation

Backend & Infra: Node.js, Express.js, FastAPI, Supabase, PostgreSQL, SQLite, WebSockets, REST APIs, Multi-tenant Architecture

AI / Agentic: LangGraph, LangChain, RAG (Semantic + Keyword + Hard-RAG), Agentic Reasoning, Chain-of-Verification (CoVe), LoRA Fine-Tuning, Claude API, Gemini API, Groq API, NVIDIA NIM, Multi-model Orchestration

Tools: Git & GitHub, Claude Code, Postman, HTTPie, VS Code, WebStorm, Netlify, Railway, Kaggle, HuggingFace

WORK EXPERIENCE

Freelance Full-Stack Developer | Babuji Chaay Café

Jul 2024 – Mar 2026 · Mira Road (E), Mumbai

- Sole developer. Delivered a production POS + Sales Management System end-to-end requirements, architecture, development, and live deployment at babujichaay.com, Serving real customers every day with zero reported downtime.
- Built the full-stack system on ReactJS, Supabase, and Express.js: billing, order tracking, inventory control, role-based auth, and real-time analytics dashboard.
- Engineered two high-value business features: a custom offer engine (owner-configurable promotions) and a Lucky Customer system where the Nth daily customer automatically receives a 100% discount, zero manual intervention, fully automated.
- Delivered a public-facing café website alongside the POS, giving the client a complete digital presence and online brand identity.

Customer Service Associate | Sahakari Bhandar (Reliance Retail)

May 2024 – Dec 2024 · Mumbai

- Managed high-volume billing and transaction processing with accuracy during peak retail hours, resolving customer discrepancies in real time.
- Maintained professionalism across 100+ daily customer interactions, building communication discipline that directly translates to client-facing technical work.

PROJECTS

Autobots — AI Swarm Orchestration CLI · Python · NVIDIA NIM · Rich · PyPI

● Live (Published)

github.com/DanielDeshmukh/autobots · `pip install autobot-swarm`

- Designed and published a production Python CLI to PyPI that orchestrates a hierarchical swarm of 9 specialized AI model clusters (80+ NVIDIA models) across command, backend, frontend, security, repair, retrieval, media, simulation, and science domains.
- Built a phased planning engine: auto-detects project type, generates implementation roadmaps with acceptance criteria, routes tasks via keyword-based cluster selection, and executes with supervised / milestone / autonomous approval modes.
- Implemented self-healing execution loops: validation commands (tests, linters, builds) run automatically post-phase; failures route to the Ratchet repair cluster for autonomous bug-fixing, with configurable retry limits and durable session checkpoints.
- Engineered safety primitives: command whitelisting, git safety-branch enforcement, workspace locking, and a kill-switch layer ensuring autonomous execution cannot cause unrecoverable damage to target repositories.

THEMIS — Mistral 7B Domain Fine-Tune · Python · Mistral 7B · LoRA · HuggingFace · Kaggle

● Active (v4 Training)

github.com/DanielDeshmukh/themis

- Fine-tuning Mistral 7B on Indian statutory law using LoRA (rank 16) across iterative dataset versions; current training corpus spans 20,909+ instruction pairs covering IPC→BNS transition, BNSS, and related statutes.
- Engineered the full fine-tuning pipeline on Kaggle: dataset construction, Unsloth + SFTTrainer integration, dual-mode `formatting_func`, and multi-epoch overfitting diagnostics across v1–v4 iterations.
- Architecturally distinct from RAG-based legal tools: a parametric knowledge model that internalises statutory mappings rather than retrieving them, enabling offline, citation-grounded statutory reasoning without a vector store.

PROTEUS — JD-Aware Resume Intelligence Toolkit · Python · NVIDIA NIM · React · FastAPI · Railway · Netlify

● MVP Deployed

github.com/DanielDeshmukh/proteus · proteus-review.netlify.app

- Built and deployed a JD-aware application toolkit: a five-agent NVIDIA NIM pipeline that ingests a job description and resume, then produces a semantic match score, skill gap analysis, targeted rewrite suggestions, and a positioning-consistent cover letter.
- Designed the full agent architecture from scratch: JD Parser → Match Scorer → Gap Analyst → Rewrite Suggester → Cover

Letter Generator, each specialised and independently testable.

- React + FastAPI full-stack; backend deployed to Railway, frontend to Netlify. Supports pasted JD text, PDF upload, and URL ingestion.

awesome-nvidia-nim — Curated Community Resource · *Markdown · Awesome List*

● 7 Stars · 1 Fork

github.com/DanielDeshmukh/awesome-nvidia-nim

- Curated and maintain the canonical awesome list for NVIDIA NIM inference microservices — covering SDKs, multi-agent frameworks, RAG integrations, deployment guides, and production projects built on the NIM platform.
- Highest-starred repository in the portfolio; demonstrates domain authority and active contribution to the NVIDIA NIM ecosystem beyond personal projects.

github-profile-score — Embeddable GitHub Profile Scorer · *TypeScript · Node.js · SVG · Railway*

● Deployed

github.com/DanielDeshmukh/github-profile-score

- Built and deployed an embeddable GitHub profile scoring service: 14 SVG card endpoints covering job-readiness score, commit streaks, language diversity, contribution heatmap, and AI-powered insight callouts via optional NVIDIA NIM integration.
- Self-hostable TypeScript service on Railway; heuristic scoring engine with regex keyword classification across 14 developer profile dimensions.

AETHER — Automated Ethical Testing & Heuristic Evaluation Routine · *React.js · FastAPI · LangGraph · Python · Supabase* ● **In Development (70%)**

github.com/DanielDeshmukh/aether

- Architecting a SaaS-grade AI security platform that moves beyond static scanning: an agentic reasoning loop (LangGraph + LangChain) simulates expert penetration-tester decision-making to adaptively identify vulnerabilities and generate targeted exploits.
- Integrated Gemini 1.5 Pro + Claude 3.5 for payload generation; built passwordless magic-link auth, multi-tenant Supabase backend, and a Kill Switch mechanism for safe bounded testing against user-defined targets.
- Frontend in React.js; execution layer in FastAPI + Playwright; real-time scan progress and remediation insights through a centralized dashboard.

Ella — Agentic Clinical Receptionist Engine (CLI) · *Python · LangGraph · Groq API · LangChain · Tesseract OCR*

● Deployed

github.com/DanielDeshmukh/ella

- Built and deployed a CLI agentic AI system with hybrid Medical RAG (semantic + keyword retrieval over OCR-processed medical texts), intent classification, and state-machine triage logic, routing patient interactions across booking, query, and emergency pathways.
- Achieved ~1.8s average end-to-end response time. Engineered LLM-based + regex safety guardrails for real-time detection of life-threatening symptoms; critical cases bypass the standard queue via an emergency escalation path.
- Integrated Tesseract OCR to ingest printed medical books as the RAG knowledge base, enabling accurate dosage calculations, empathetic guidance, and red-flag symptom recognition grounded in verified medical sources.

Hector — Hard-RAG Legal Intelligence System · *Python · LangChain · CoVe · Hybrid RAG*

● In Development

github.com/DanielDeshmukh/Hector

- Designing a zero-hallucination agentic AI for Indian law (IPC → BNS transitions) on Chain-of-Verification (CoVe) architecture: hybrid retrieval + hierarchical contextualisation + strict citation validation with page- and paragraph-level traceability.
- Validator Agent refuses to generate responses not grounded in verified Bare Acts and legal commentaries, structural guarantee against fabricated citations, not a prompt-level instruction.

Luxury Interior Design Portfolio · *React 19 · Vite · TailwindCSS · WhatsApp API · Netlify*

● Live

danieldeshmukh-webdesigns.netlify.app

- Client-facing portfolio with luxury branding, Swiper-powered media, dynamic project filtering, SEO optimisation, and full mobile responsiveness.
- Automated inquiry-to-WhatsApp pipeline: form submissions delivered to the client in real time, zero manual follow-up required.

EDUCATION

Bachelor of Computer Science · Shree L.R. Tiwari Degree College, Mumbai University Graduated May 2026 · CGPI: 7.38

Sem I: 7.85 · Sem II: 7.35 · Sem III: 6.55 · Sem IV: 7.50 · Sem V: 7.40 · Sem VI: 7.60

CERTIFICATIONS & LEARNING

- Anthropic — Claude with Anthropic API · Claude Code 101 · Claude Code in Action · Intro to Agent Skills · Intro to Sub Agents · Intro to MCP · MCP Advanced Topics (7 certificates, 2026)
- Harvard CS50 — Introduction to AI with Python (12 projects, 2026) · Introduction to Databases with SQL (final project: Hector)
- freeCodeCamp — JavaScript Algorithms & Data Structures · Front-End Development Libraries · Responsive Web Design
